

Trade Readiness Copilot - Reviewer Brief

Status: built for review, not approved for public launch

Short version

The local product is built enough to review, but it is not approved for public launch, hosted private beta, live payments, customs/trade claims, or buyer/supplier validation.

What I need from you

Please review only your area. You do not need to audit the whole repo.

Reply with one decision: looks okay for my area, not ready yet, I need more evidence, not my area, or send to a different reviewer.

If it is not ready, list the top issues, what evidence is missing, and what would make it safe to approve.

Please also say what the product must not claim in your area.

What is not approved yet

- Public launch
- Hosted private beta with real customer data
- Legal/privacy/security approval
- Customs, tariff, CFIA, sanctions, or trade-readiness claims
- Live payment activation
- Real user/private beta outcome claims
- Buyer or supplier validation claims
- Final public go/no-go approval

Best review match

- Product/UX: Can target users understand the flow and the claims that are not approved yet?
- Security: Are uploads, auth, AI, storage, logs, and deployment controls safe enough for hosted beta?
- Privacy/legal: Do notices, terms, data handling, retention, deletion, and incident steps match real flows?
- Customs/trade: Does any language imply tariff/customs/CFIA/import/export advice that needs a broker or specialist?
- DevOps: Is there enough hosted staging/production evidence, monitoring, backup, rollback, and support ownership?
- Payments: Is live checkout, webhook, tax/refund/support, and billing language ready?
- Buyer/supplier/commercial: Is there real counterpart evidence, not just a plausible idea?
- Launch owner: Are all review areas evidenced enough to make a public go/no-go decision?

Important note

This brief lists what is still needed. It does not prove outside approval, legal/privacy/security signoff, customs/trade review, hosted production proof, live payment

activation, private-beta outcome, buyer/supplier validation, or public go/no-go.
