

External Validation Reviewer Brief

A short, plain-English brief for busy reviewers. The detailed checklist is still available as the companion appendix PDF.

Question	Current answer
Can this be publicly launched now?	No
Can it take live payments now?	No
Can it claim legal or trade approval now?	No
What can reviewers do now?	Review the scoped package and send a short decision plus missing evidence.

What I Need From You

Please review only your area. You do not need to audit the whole repo.

Reply with one decision: looks okay for my area, not ready yet, I need more evidence, not my area, or send to a different reviewer.

If it is not ready, list the top issues, what evidence is missing, and what would make it safe to approve. Also say what the product must not claim in your area.

The Eight Review Areas

Review area	Plain-language question
Real External Expert Reviews	Have real named reviewers checked the right scope?
Legal, Privacy, And Security Approval	Is customer data handling, security, AI use, retention, deletion, and incident response acceptable?
Qualified Customs And Trade Review	Does a qualified broker/trade reviewer approve what the product says and does not say?
Hosted Staging And Production Proof	Is there real hosted staging/production evidence, not just localhost?
Live Payment Activation	Are live checkout, webhooks, tax/refund/support, and billing language ready?
Real Users And Private Beta Outcomes	Have real target users completed the flow without unsafe misunderstanding?
Buyer And Supplier Validation	Have real buyers/suppliers/importers/exporters validated a real problem and workflow?
Public Go/No-Go Approval	Has a named owner reviewed all evidence and made a launch decision?

Fast Response Template

Decision:

Scope reviewed:

Top issues:

Evidence missing:

Claims the product must not make:

What would make this ready for my approval:

What To Ignore

You do not need to review unrelated code, old package zips, or every generated artifact. Focus on the role-specific packet and the claim boundary for your area.

Important Note

This brief lists what is still needed. It does not prove outside approval, legal/privacy/security signoff, customs/trade review, hosted production proof, live payment activation, private-beta outcome, buyer/supplier validation, or public go/no-go.
